# STK | Electric Nursing Bed

## Abdominalself-extension Relief

The automatic retraction function allows the backboard and leg boardsto be folded and retracted to both sides at the same time, increasing thespace for the pelvis and waist, thus reducing the pressure on tissues andorgans and the shearing force of the bed surface on the patient,preventingsurgery.After the wound was squeezed

## ManualCPR

In emergency situations, the patient can be quickly returned to ahorizontalposition

## Night Light

Night light underneath the bed helps patient geetingup at night

## Real-time displayofoperationaldata

The nurse operator is equipped with a 3.5-inch nursing remote,which can display operating position data and actualoperation inreal weight etc.

## Back X-ray Function

Filming of critically ill patients can be completed in the ward. The backpanel is equipped with an X-ray film cassette slide, and the X-raymachine can be used for near-full body photography without movingthepatient.

## Emergency stop

Improper operation or emergencies can quickly stop the hospital bed.

# Smart Series

Focus on patient safety

Promote speedy recovery

Patient sitting position controller

01

handheld controller

02

Nurse controller (optional)  
can control the entire bed and has the  
ability to lock the patient's controller to  
prevent unauthorized adjustments.

03

Plug-in bed head and foot board

04

Bed extension function (optional)

05

Anti-collision wheels around the  
bed and can be expanded to fix  
other accessories

06

Optional safety guardrails at the  
end of the bed make the entire  
bed a fully enclosed environment,  
making it safer

07

The bed guardrail has 4 high-  
position PA6 nylon drainage  
hooks with buckle design, which  
are detachable and removable  
and can also ensure that the  
drainage bag is >200mm above  
the ground when the bed is in a  
low position.

08

TENTE central control caster  
system (full braking + full freedom  
+ directional promotion) yellow  
conductive casters, anti-static

09

10 Bed head exercise bar (optional)

11 Built-in storage box in the guardrail (can  
hold glasses, mobile phones, etc.)

12 The back guardrail is designed to be easy to  
hold, allowing patients to get in and out of  
bed to facilitate early rehabilitation  
exercises.

13 Back guardrail inner controller (patient)

14 Back panel X-ray perspective (optional)

15 Back angle display, special scale marks of  
30° and 45° are set with built-in LED lighting  
(convenient for night rounds and unlocked  
guardrail warning)

16 The controller on the outside of the  
guardrail (nurse) can control the entire bed  
and lock the patient controller. The LCD  
displays the backboard angle, legboard  
angle, bed tilt angle, lifting height, alarm  
information, etc. in real time.

17 Bed tilt angle display

18 Manual CPR feature on both sides

19 X vertical lifting, no front and back  
displacement when the bed is raised and  
lowered to avoid collision with walls and  
squeezing of other medical equipment

20 Mattress left and right limiters + bed surface  
restraint handles 4

21 Caster cable pusher (optional) can prevent  
casters from crushing the power cable when  
moving the hospital bed

22 8 low drainage hooks under the bed and 6  
restraint handles under the bed

23 Emergency stop button

Functional Details

▼ End of bed controller

▼ Central guardrail controller

▼ Controller and handheld controller outside the middle guardrail

▼ Low bed position (bed 450mm above ground)

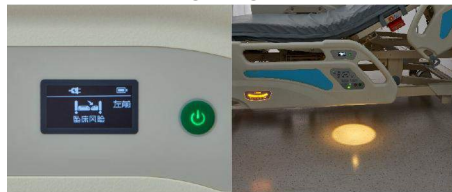

▼ Bed surface height indication (low green + high yellow)

▼ Guardrail LED indicator light

▼ Battery display + status display + under bed night light

▼ Built-in storage box (glasses, mobile phone) in the guardrail

▼ Safety warning system at the end of the bed + night light behind the bed

▼ The effective protection height of guardrail is 430mm

▼ Guardrail lowering to prevent pinching feet

▼ Safety guardrail at the end of bed (entire bed fully enclosed)

▼ Plug-in headboard + automatic lock + one-hand unlock

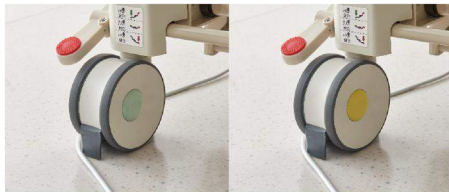

▼ Back angle display

▼ Bed tilt angle display

▼ Caster cable pusher (to prevent crushing of power cables)

▼ One-button emergency stop button

▼ One-button electric CPR and manual CPR

▼ Left and right mattress limiters and bed surface restraint handles

▼ Restraint handle under bed

Low-position drainage hooks under the bed and high-position drainage hooks on the bed guardrails

▼ TENTE central control casters (anti-static)

▼ The back panel is X-ray transparent

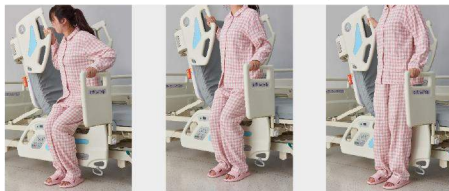

▼ Bed end extension

Early rehabilitation

▼ Back guardrail (to assist in getting in and out of bed)

▼ Exercise pull up bar

▼ The corner guardrail at the end of the bed can be used to assist walking

Smart Series

MODEL

Smart-Q5 / Smart-Q7 / Smart-Q9

SPECIFICATIONS

L2180 x W1040 x H450-850mm

Basic Function

Fold up/down on the back

Leg fold up/down

Back and leg linkage  
(abdominal decompression)

Bed lowered

Bed rises

Trendelenburg

Reverse  
Trendelenburg position

Special postural functions required for severe illness

One-click  
heart chair position

One-click  
30° posture

One-click  
check position

One-click  
lowest position

More one-click positions:

One-button semi-sitting and recumbent position (Fowler position), one-button concave position, one-button head-down supine position, one-button full reset, one-button bed-leaving position, and one-button electric CPR.

Function:

- **Basic functionality:**  
Fold up/down on the back, Leg fold up/down, Back and leg linkage (abdominal decompression), Bed lowered, Bed rises, Trendelenburg, Reverse Trendelenburg position, One-button electric CPR, manual CPR (emergency lowering of the back).
- **Special postural functions required for severe illness**  
One-click heart chair position, One-click 30° posture, One-click check position, One-click lowest position, One-button semi-sitting and recumbent position (Fowler position), one-button concave position, one-button head-down supine position, one-button full reset, one-button bed-leaving position, and one-button electric CPR.
- The guardrail is not pulled up, the guardrail is not locked, the bed is in a high position for a long time, the casters are not locked, etc., supplemented by light warnings to create a safer care environment;
- Intelligent hospital bed system, nurse station computer, nursing PDA, etc. centrally display the real-time posture of the hospital bed, including backboard angle, legboard angle, lifting height, alarm information, etc., to facilitate the management of patients in special positions;
- The electric 7 basic positions + 9 special position functions for severe cases meet the needs of complex nursing scenarios such as comprehensive and specialized ICU;
- According to different care needs, it can be adapted to static anti-decubitus mattresses, dynamic anti-decubitus mattresses, roll-over mattresses, etc.;
- Optional bed extension, weighing function, back panel X-ray and other functions are available.

Color styles available:

# SMART SERIES ELECTRIC BED

Interpreting the concept of "patient-centered" and using technological means to make patients feel "patient-centered", smart hospitals also respond warmly to patients' needs and create digital hospital beds and smart wards that are truly patient/bed-centered.

Q5

Q7

Q9

Anti-decubitus mattress

- Special gel material, anti-bedsore function, without the noise disadvantages of traditional air cushions;
- Extend the interval between turning and reducing nursing labor intensity;
- Combined with the gel body positioning pad, prone position ventilation can be achieved.

3D anti-mite breathable mattress

- The mattress is both waterproof and breathable, making it especially suitable for medical environments;
- The bed cover is made of anti-mite fabric, which has a strong anti-mite effect;
- The 3D material in the inner core of the mattress can be washed, and the mattress cover can be cleaned and disinfected, meeting higher medical disinfection requirements in the future.

BT350A bedside table (for ICU only)

- Dimension:L510\*W510\*H800mm
- Materials: Aluminum alloy pillar, HPL board, Aluminium composite panel for side and backboard
- One cold rolled steel drawer powder coated with silent sliding rails and one sliding cabinet, an opening storage space
- 4pcs noise-free φ60mm casters, 2pcs with brake
- Two towel bars on the two sides of the cabinet
- Color: 4 colors available

DT280Mobile dining table

GP342/GP347  
Gel pad for prone position

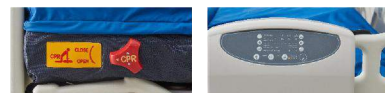

Dynamic bedsore prevention mattress

- The two groups of airways periodically inflate and deflate alternately to disperse the pressure on the compressed parts and prevent bedsore.
- Headrest function, CPR quick deflation function
- Micro-hole air jet function, transfer and handling function.

Turn over bedsore prevention mattress

- Pressure selection based on patient weight, no cumbersome operating steps, more intelligent
- The two groups of airways cycle alternately inflate and deflate, periodically change the pressure-bearing parts of the body, and alternate decompression cycles.
- Functions of turning left, lying flat, and turning right, turning left and right 30°, and can cycle side turning at regular intervals;
- Sitting position function, static transfer and transportation function, CPR quick deflation function.

BA136A mobile infusion pole

BA973 end of bed writing board

BA311 sputum suction device hanger

# TT I Multifunctional transfer bed

## Mattress

- It adopts a 70mm thick, waterproof and breathable mattress, making it more comfortable for patients to lie flat.

## bed board

- The bed board is made of Compact Laminate material to ensure strength. Can shoot X-Ray (optional)

## Back lifting function

- Operate the control handle to control the silent gas spring to achieve stepless lifting and lowering of the back plate. Double gas spring, higher safety

## Central control casters

- It adopts resin casters with a diameter of 200mm and has central locking pedals on all four corners to facilitate operation by medical staff.

## Center Fifth Wheel System

- It adopts silent casters with a diameter of 125mm. Through the operating lever, it can be flexibly switched between the "straight" and "free" states. The joystick is 50mm above the ground for better passability.

## Rotating guardrail

- The guardrail height is 300mm, which is safer. The guardrail can be placed horizontally and is easy to puncture with the IV stand. The load-bearing capacity is 10kg. Concave design, can fix the catheter, anti-slip effect

## Recording table (optional)

- The reversible recording table is convenient for medical staff to record or place instruments.

## Aluminum alloy die casting

- Truly integrated molding, patented design, no riveting, never loose. Better strength, safer and more fashionable in appearance.

## Guardrail double safety lock

- There is a safety lock on the side of the foot to prevent misoperation and provide higher safety.

## Intelligent weighing system

- LCD display, safety position weighing function, error 0.01kg. (Optional)

## Imported hydraulic cylinder

- Using American practical power and double columns, it is more reliable and quiet, ensuring patient safety.

## Product Features

Back rise  
0-90°

knee rise  
0-40°

bed lift  
560-890mm

head tilt  
0-18°

foot tilt  
0-18°

# TT I Multifunctional transfer bed

## TT-70

### Transshipment Car

#### Bed Body Material

The bed body is made of high-quality steel + powder coating process. The bed surface is made of PP blow molding.

#### Rotating guardrail

The guardrail can be placed horizontally, making it easy to puncture the drip stand. It has a load-bearing capacity of 10kg and a T-shaped design that can fix the catheter and play an anti-slip role.

Back rise  
510-850mm

Back rise  
0-70°

## FEATURES

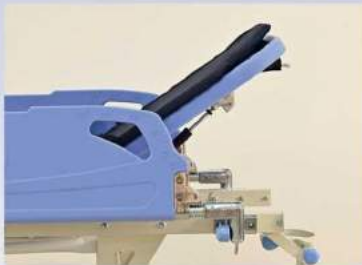

#### Central control silent casters

Diameter 150mm. It has resin double-sided casters and central locking pedals at all four corners for easy operation by medical staff. Diameter 150mm. It has resin double-sided casters and central locking pedals at all four corners for easy operation by medical staff.

#### Center fifth wheel

Through the operating lever, the cart can be flexibly switched between "straight" and "free" states. It is easier to control the direction by going straight.

#### Back panel angle display

There is an angle display on the guardrail, which allows you to visually see the angle of the backboard, making it easier for medical staff to observe angle changes.

#### Tray

The tray is divided into two parts with different sizes and depths, and is equipped with multiple leakage holes, making it easy to use and clean. The load capacity is 10kg.

#### Height adjustment handle

The height of the bed can be adjusted via the hand crank. Height adjustment range 510-850mm

#### Guardrail double safety lock

There are double safety locks on the foot side to prevent misoperation and provide better safety.

#### Back lifting function

Operate the control handle to adjust the silent gas spring to realize the back angle lifting function

#### Aluminum alloy die-cast joint parts

Integrated molding design, high strength and more fashionable appearance.

#### Transfer mattress

Made of high-tech waterproof and anti-static fabric, washable and easy to clean. The overall design has a 3-stage structure, and only one person is needed to transport the patient.

#### Oxygen bottle storage rack

It can hold up to 7L oxygen bottles. When not in use, it can be stored under the back panel for convenience and safety.

# TT I Multifunctional transfer bed

## TT-60

Transshipment Car

The overall lifting adopts a rocker-type design, with a lifting stroke of 500-800mm. The crank handle adopts two-way interference protection and automatic lubrication function.

The fifth wheel design is added to make the flat car more convenient and faster in straight line and turning movements. The base of the flat car is a 1.5mm cold-rolled steel plate, which is stamped and formed in one go using a mold. It is durable and stable;

There is an oxygen bottle holder on the front of the bed, which can hold a 5L oxygen bottle for emergency use.

The brake adopts advanced central control braking system, four fully braked casters, wheel diameter  $\varphi 150\text{mm}$

The guardrail adopts ABS lift-type guardrail, and uses a gas spring buffer design when lowered to improve comfort and service life of the guardrail.
